Game Design Document

Working title *A temporary, catchy name for the game.*			**Hardened**	
Developer's name(s) *Include roles if you plan to work as a team*			**Nicholas McEntee**	
Genre(s) *State the primary genre and any secondary genres. (or game reference)*			**Platform, Fantasy, Medieval**	
Concept statement *A one or two-sentence pitch describing what the game is, its main features, and/or why it is fun.*			**It is a 2d Platformer game where you play as a knight in order to save the princess. There are plenty of traps and tricks throughout the levels.**	
	Engine *The software used to build the game*	*Godot*	**Platform** *The OS you plan to release your game*	*Web – Itch.io*
	Control *The primary input method*	*Keyboard, movement – WAD, and Arrow keys, Interaction - E*		

	Feel/Mood *Describe the overall emotional atmosphere of the game.*	*Tense, at some points its a trick game, at others there's no tricks at all. If you fail you restart. Supposed to create frustration and when finished a sense of thrill.*
	Visual Style *Describe the art direction, camera angle, color palette, and visual fidelity.*	*I want to focus on 2d art, mostly pixel art, that fits into the medieval fantasy style. I want to go with both darker and bright colors, mostly bright since I enjoy lighter colors and it contrasts with the charecters better.*
	Audio Style *Describe the music genre, and overall audio direction.*	*-- No Audio -- , Couldn't find an audio I liked that was free, so I went with no audio at all. I'd rather have no audio than have an audio in my game that doesn't feel right.*
	Game Characters and Objects *List down the characters and objects in the game and their role.*	**Main Character – Knight – user who tries to save princess** Side Character – all the NPC's who try to help the main charecter Enemy 1 - Slime on first level Enemy 2- Slimes on 2nd level Boss- Dragon that "kidnapped" the princess
	Objective and Progression *Explain the long-term player goals and how the game introduces new challenges over time.*	**The long-term goal is to save the princess, the first level is a challenge because the game is trying to trick you, the second level has no tricks at all in order to put confusion into the player's mind. The third level makes the user realize that the princess never wanted to be saved.**
	World Building *Briefly describe the setting, key lore, and dynamics between characters and the world.*	**Outdoors, Medieval Fantasy World,** The knight is a important figure in the kingdom and is tasked with saving the princess After finally making it to the dragon, he slays the dragon just to find out that the princess purposely left with the dragon.
	Actions *List the actions that the players can do.*	**Move, Interact with characters, collect items, use items (by way of keys)**
	Rules *Outline the fundamental constraints and win/lose conditions of the game.*	**Win – make it to the end and talk to the princess** Loss- any time the world is reset and you have to start at the begging.
	Core loops *Describe the minute-to-minute gameplay cycle, how does the player interact with the game objects or other characters*	*e.g., Fight -> Loot -> Upgrade* *Parkour your way through traps -> Key-> Door-> more traps -> portal*
	Game Systems *List down specific systems like combat, inventory, crafting, or leveling.*	**No Combat, have to evade enemies,** Will Have an inventory to carry certain objects needed to complete the level.

Project Focus

Before diving too deep into the implementation, list down the things you want to achieve through the making of the game. (e.g.make a new game from scratch, learn more about GD Script, make your own art or music, expand on design of mechanics)

1. Major – Storytelling / Narration

Task List

The list of tasks required to complete your project prototype, include priority and assignment to team members (if applicable).

Feature	Task	Priority	Assigned to
New Level	It is a boss level that finishes the story.	2nd	Nick

Changing the Design to include storytelling	Create features that help include a story into the level, show multiple NPC's which have dialogue and give you direction while also building the story.	1st	Nick
